Jirakova, Irina

TITLE:

Using the Aritma digital computer for linguistic research.

PERIODICAL:

Referativnyy zhurnal. Avtomatika i radioelektronika, no. 5, 1962, abstract 5-1-111 i (Inform. služba pracovniky SPS Aritma, 1960, no. 24-25, 467-469)

TEXT: The wide possibilities of using punched-card digital computers for a variety of linguistic work, first of all for the compilation of dictionaries, are noted. Dictionaries are classified according to their designation (encyclopedic and linguistic), number of languages, specialisation, and a number of other characteristic. Dictionaries of the essential words (occurring most frequently), used for educational purposes and for the design of foreign-language school books, are especially important. The manual compilation of such dictionaries is tedious and time consuming (the compilation of "A Dictionary of Most-Used Words of the Czech language" edited by Jelinka, took 7 years for a group of 35-56 people). The position is Card 1/2

similar with the dictionaries of special terms, because of the fast development of science and technology. Irrespective of the various specific requirements raised for any kind of dictionary, there are some features which they all have in common - the writing out and processing of words on individual cards, and their classification. The first operation (even if the whole of the remaining work is automated) will be done manually in the foreseeable future. The operations related to the classification of words (the sorting of cards characterizing an actual word from various points of view - grammatically, according to the derivation of the stem, etc., and their arrangement in alphabetical order) can be executed by digital computers, preferably by punched-card machines. The manual processing of punched cards is then reduced to the simplest operations of coding the words and their characteristics (aspect, gender, case, etc., field of application - colloquial, literary, technical, etc. and their derivation - national, Latin, Russian, etc.). The classification of words by computers, considerably simplifies and speeds up the compilation of dictionaries. The utilization of computers is also of great importance in linguistic investigations which require the statistical analysis of e.g. various grammatical categories. [Abstractor's note: Complete translation].

"Contribution to the Study of Specific Colostral Immunity of Calves Born From Cows Vaccinated Against the Foot-and-Mouth Disease."

Prague, Veterinarni Medicina, Vol 11, No 5, May 66, pp 303 - 310

Abstract /Authors' English summary modified 7: Transmission of immunity from cows to calves was studied in 12 cows and 34 calves. Vaccination using 20 ml of adsorbate vaccine caused a rise in the level of virus-neutralizing antibodies, maintained for about one year. After parturition the level of antibodies in the colostrum is higher than in blood serum of the cows; the high level lasts for 7 days. The antibodies are transmitted to calves only by the colostrum, and they can be found in the calves only after they drank the colostrum. High levels in the blood of the calves result in longer lasting immunization, when compared to low levels. 2 Tables, 7 Western, 1 Russian reference. (Manuscript received 30 Dec 65).

SOURCE: Ceskoslovenska fysiologie, v. 14, no. 2, 1965, 98-107

TOPIC TAGS: tissue physiology, histology, cytology, biochemistry, morphology, biologic metabolism, cell physiology

ABSTRACT: History of morphological investigation of the placenta is reviewed; metabolic processes were studied in trophoblast in cell culture. The cells were grown by the method of rotating test tubes, and their growth, histological and chemical properties, and biochemical changes were investigated. Large and small epitheloid cells and giant cells with several nuclei were observed in the culture. Solubilization of the coagulate around the ex-plantate is discussed. Degenerative changes, changes due to the growth of the cells, and dedifferentiation of epithelial cells are

Abstract: [Authors' English Summary] Description of histologic and
histochemical picture of sections from cultures of chorion vili,
cultivated in vitro for 120 hours is given. Two different forms
of plasmodial structures were found on the surface of explanted
vili. Growth of epithelial cells with the character of cytotro-
phoblast was observed.

AUTHOR: Jirasok, Karel - Irasek, K. (Doctor of medicine) BORG: Physiatrics Department /headed by Lt. colonel, Doctor of medicine Vaclav Stastry/,
Central Military Hospital, Prague (Fysiatricke oddeleni Ustredni vojenske nemocnice)TITLES: Neurotherapy and its practical use [This paper was presented at the Armed
Forces Conference of Military Physicians at VLU Piestany in 1964.]SOURCE: Vojenske zdravotnicke listy, no. 4, 1965, 158-160TOPIC TAGS: therapeutics, nervous system, reflex activity, physiotherapy

ABSTRACT: Neurotherapy, which influences the neural regulation of the diseased organ by blocking the radiating reflexes and secondary surface changes, play a very important part in comprehensive therapy. It makes full use of many easily handled methods such as intradermal therapy, infiltrations and reflex massages, which may be introduced at all medical institutions. It suppresses many complicated disorders that often trouble patients, brings subjective relief of pain, and influences the treatment of the primary disease. In functional disorders, it has a causal effect. Occurrence of secondary changes, their qualities, localization, and examination are described.
